

Filter Sheets CKP

CKP filter sheets can be used for a wide range of applications, from roughing to sterilisation of liquids for food use, pharmaceutical and chemical solutions.

After research, we have been able to develop the new range of CKP filter sheets. The structural modifications have improved the technical characteristics of the products, increasing efficiency, output, duration and the mechanical resistance of the device during the filtering process. The high quality, the structure that prevents any loss of fibres and the “CKP branded” inflow side are unchanged. We added 2 brand new grades: CKP V14 (medium polishing) and CKP V28 (sterilizing with highest retention). The accurate controls of our production allowed us to outline a graph highlighting specific capacity and the retention power of each filtering sheet.

We certify that all CKP grades are suitable for foodstuffs contact according to Regulation 1935/2004/EC, BfR

Caratteristiche della carta Paper properties	unità unit	V0	V4	V8	V12	V14	V16	V18	V20	V24	V28
Grammatura Basis Weight	g/m ²	790	1040	1050	1140	1230	1260	1290	1320	1370	1400
